/ROBERT WEINHARDT/

Supervisory Patent Examiner, Art Unit 3688

PTOL-303 (Rev. 08-06)

/M. S./

Examiner, Art Unit 3688

Continuation of 3: Newly added limitations including at least: tag on a surface of the article; each coded data tag encoding an identity of the article and a position of the coded data tag on the surface of the article, and the data including an application identifier, the application identifier being derived from the identity of the article and the position of the coded data tag on the surface of the article; require additional search and consideration and were not previously considered.

Continuation of 11: Applicants remarks are based on the newly presented claim limitations as presented above. The claim objections of Claims 2-34 and 38 have been overcome with the appropriate amendments providing for proper antecedent basis. The previous drawing objections related to the previously presented claims have been overcome with the cancellation of at least both "providing machine readable coded data on a surface of the artice, the coded data comprising coded data portions, each coded data portion interaction data an aim of the coded data portion on the surface of the article." and "determining by the computer system and from the interaction data an identity of the article he position of the sensed coded data portion. The previous \$112 fil rejection of claims 1-34 and 38 appears to have been overcome with the cancellation of "determining by the computer system that the position of the sensed coded data portion." With the addition of newly presented claim limitations, not previously considered, including at least "tag on a surface of the article; each coded data tag encoding an identify of the article and a position of the coded data tag on the surface of the article; and the data including an application identifier, the application identifier being derived from the identity of the article and the position of the coded data tag on the surface of the article; and the data including and application identifier, the application identifier being derived from the identity of the article and the position of the coded data tag on the surface of the article; and the data including and application identifier, the application identifier being derived from the identity of the article and the position of the coded data tag on the surface of the article, additional search and consideration is required to determine whether the previous \$103 (25 pcitions) of ediations 1-34 and 38 based on Want et al. (US 6.12-520) in view of Tillizern et al. (US 6.32-623) will apply.
